

FLOATING SHELF INSTALLATION

PRE DRILL

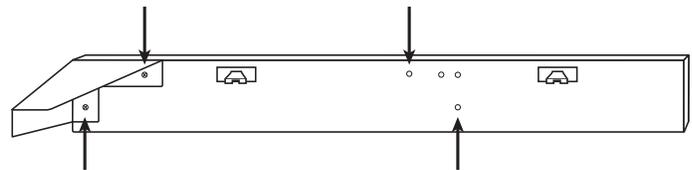

Pre drill holes in mounting cleat for metal brackets.

Brackets should be spaced out so that the center hole on each bracket aligns with a stud.

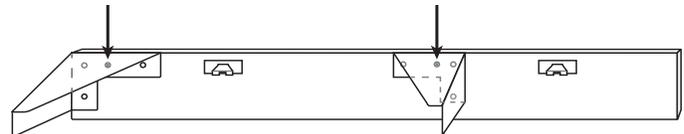

ATTACH BRACKETS

Loosely attach brackets to cleat using short (1.5") screws in outer holes. Do not fully tighten screws.

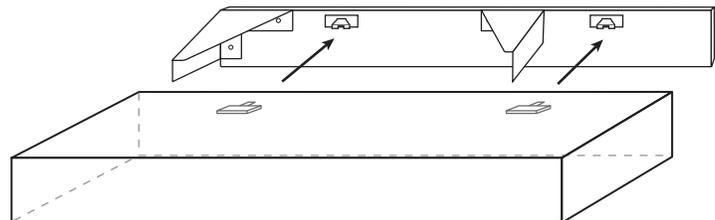

MOUNT CLEAT

Use long (3") screws to mount cleat to wall using middle hole, ensuring screws penetrate the studs. Tighten outer screws to penetrate the drywall.

INSTALL SHELF

Slide shelf onto metal brackets, with clips orientated in same direction as on the cleat. Press firmly to insert cleat into shelf opening and lock clips together.
